8-2 Rational Expressions Practice Answer Key

To divide rational expressions multiply the first fraction by the reciprocal of the second. Divide Rational Expressions. Rewrite the division as the product of the first rational expression and the reciprocal of the second. Factor the numerators and denominators completely. Multiply the numerators and denominators together.

Rational Expressions - Multiply & Divide. Multiplying and dividing rational expressions is very similar to the process we use to multiply and divide fractions. Example 1. $15 \cdot 49 \cdot 14 \cdot 45$ First reduce common factors from numerator and denominator (5 and 7) $3 \cdot 7 \cdot 2 \cdot 9$ Multiply numerators across and denominators across $6 \cdot 63$ Our Solution The process is identical for division with the extra first step of multiplying by the reciprocal.
