animals except the rat lacks a foramen of Magendie. [The hypophysis in the female is greater in weight than the male. [The surface of the rat cerebrum, as with most lower mammals, is smooth without the complex sulcal pattern seen in humans Endocrine System [Adrenal glands are larger in the female than the male. ANATOMY & PHYSIOLOGY

RATS - BIOLOGY & HUSBANDRY

Rat Dissection: Anatomy of Rat. The anatomy of rat can be classified into two parts, namely, external and internal. The external anatomy encompasses the head (cranial region), neck (cervical region), chest (thoracic portion), pectoral (portion where forelegs attach), abdomen, pelvic (portion where hindlegs attach) and tail. Though both sexes have teats, you can differentiate the male and female rat.

*Neotoma magister* Baird, 1857 Allegheny Woodrat. *Neotoma magister* Baird, 1857:xliv, 498.Type locality [Carlisle Bone Cave, Pennsylvania.] *Neotoma pennsylvanica* Stone, 1893:16.Type locality [near the top of Stone Mountain (2,000 ft.), Cumberland County, Penna. [Pennsylvania], some six miles from Pine Grove, at a point known as Lewis's Cave.]]

*Neotoma magister* | Mammalian Species | Oxford Academic

Mice like to gnaw on household objects. Gnawed wood, wires, fabrics, and even soaps are a sign a mouse is nearby. Rats live in different areas depending on their species. Some rat species, like roof rats, prefer to live up high in trees, attics, on the roof of a home or building, or in other tall dwellings.
