Coulomb Law Questions And Answers

d) Maxwell theory. View Answer. Answer: a. Explanation: Coulomb law is applied to static charges. It states that force between any two point charges is proportional to the product of the charges and inversely proportional to square of the distance between them. Thus it is employed in electrostatics.

In equation form, Coulomb's law can be stated as. where Q_1 represents the quantity of charge on object 1 (in Coulombs), Q_2 represents the quantity of charge on object 2 (in Coulombs), and d represents the distance of separation between the two objects (in meters). The symbol k is a proportionality constant known as the Coulomb's law constant. The value of this constant is dependent upon the medium that the charged objects are immersed in.

2.2 Coulomb's Law Consider a system of two point charges, q_1 and q_2 , separated by a distance r in vacuum. The force exerted by q_1 on q_2 is given by Coulomb's law: $F = k \frac{q_1 q_2}{r^2} \hat{r}$ (2.2.1) where k is the Coulomb constant, and \hat{r} is a unit vector directed from q_1 to q_2 , as illustrated in Figure 2.2.1(a). q_1 q_2 (a) (b)

Typically we would derive Coulomb's law from the Maxwell equations, so we're trying to solve
$$\nabla \cdot \mathbf{E} = \nabla^2 \varphi = \frac{\rho}{\epsilon_0} \quad (1)$$
 In n spatial dimensions and in Cartesian coordinates (x_1, \dots, x_n) , this becomes
$$\sum_{k=1}^n \frac{\partial^2}{\partial x_k^2} \varphi = \frac{\rho}{\epsilon_0} \quad (2)$$
