Black-band disease, discolored spots, red-band disease, and yellow-blotch/band disease appear as discolored bands, spots or lesions on the surface of the coral. Over time, these progress across or expand over the coral's surface consuming the living tissue and leaving the stark white coral skeleton in their wake.

Coral Diseases: Corals Tutorial - National Ocean Service

Coral diseases Aspergillois, caused by the fungus *Aspergillus sydowii*, affects Gorgonian soft corals commonly known as sea fans. White pox disease, caused by *Serratia marcescens*. Black necrosing syndrome, or Dark spots disease, probably fungal.

Coral disease - Wikipedia

Corals, in particular, are susceptible to a number of diseases including black band disease, white band disease, and coral bleaching. Black Band Disease Black band disease. Photo courtesy Paige Gill, Florida Keys National Marine Sanctuary. Symptoms: Black band moving across the surface of coral colonies, leaving behind exposed white skeleton; Entire colonies may be killed within months; Cause: Black band disease is primarily caused by a bacteria called *Phormidium corallyticum*

Coral Diseases – South Florida Aquatic Environments

Brown band disease – the disease front has a characteristic brown band made up of microscopic ciliates. The intensity of the brown colour varies with ciliate density. These ciliates eat the coral tissue without burrowing in the skeleton and thus do not leave speckles behind. Brown band disease is very common especially on *Acropora* corals. It has a rapid rate of progression varying between 20 to 100 mm per day.

Common coral diseases in the Caribbean. (A) *Diploria strigosa* with black band disease, (B) *Dichocoenia stockesii* with white plague, (C) *Acropora cervicornis* with white band and (D) *Montastraea faveolata* with yellow blotch syndrome.

Disease Impacts | Reef Resilience

We now know that five coral diseases are positively correlated with high water temperature – these are bacterial bleaching, black band disease, plague, aspergillosis and dark spots disease. Nutrient (sewage) input, sedimentation, and runoff have all been cited as correlated with disease incidence, however in almost all of these reports no data are provided.
