Memory and Suggestibility in the Forensic Interview—

Inced, Binet 's researcb on suggestibility in visual memory is similar to much later research. For example, the influential line of work begun by Elizabeth Loftus and her colleagues (e.g., Loftus and Palmer, 1974, Loftus et al., 1978) on the effects of suggestion on visual memory are similar in spirit to Binet ' s. In the Loftus misinformation experiments, subjects study a scene and then later certain items are suggested as being in the scene that were not actually present.

Memory And Suggestibility In The Forensic Interview—

Suggestibility is the quality of being inclined to accept and act on the suggestions of others. One may fill in gaps in certain memories with false information given by another when recalling a scenario or moment. Suggestibility uses cues to distort recollection: when the subject has been persistently told something about a past event, his or her memory of the event conforms to the repeated message. A person experiencing intense emotions tends to be more receptive to ideas and therefore more sug

Suggestibility—Wikipedia

Schacter asserts that "memory's malfunctions can be divided into seven fundamental transgressions or 'sins.'" These are transience, absent-mindedness, blocking, misattribution, suggestibility, bias, and persistence. The first three are described as sins of omission, since the result is a failure to recall an idea, fact, or event.

The Seven Sins of Memory—Wikipedia

Abstract. In this review we examine factors hypothesized to affect children's memory for traumatic events. Theoretical ideas on the processing and remembering of trauma are presented and critiqued. We review research on how psychopathology may generally influence and dissociation and posttraumatic stress disorder may specifically influence children's memory and suggestibility.

Trauma, memory, and suggestibility in children—

Memory and Suggestibility in the Forensic Interview. Memories are the ultimate foundation of testimony in legal settings ranging from criminal trials to divorce mediations and custody hearings. Yet the last decade has seen mounting evidence of ...

Memory and Suggestibility in the Forensic Interview—

The suggestibility of children's memory. In this review, we describe a shift that has taken place in the area of developmental suggestibility. Formerly, studies in this area indicated that there were pronounced age-related differences in suggestibility, with preschool children being particularly susceptible to misleading suggestions.

[PDF] The suggestibility of children's memory—Semantix—

Despite the considerable research to date, it cannot be concluded that children as a rule are more suggestible than adults according to their definition of genuine, memory-based suggestibility. Rather, when considered in terms of conversational processes that can influence children ' s answers to an investigator ' s questions, the potential for socially based suggestibility is widespread.
