Robotic cystectomy is simply a newer, more effective, minimally invasive surgical method for bladder cancer. This procedure utilizes the da Vinci Surgical System in which a robotic arm imitates the surgeon's movements, amplifying their precision. It offers bladder cancer patients the prospect of a more effective surgery and less problematic post-surgical recovery.~~

Why Choose Robotic Cystectomy For Bladder Cancer Surgery

bladder. Traditional open surgery would involve one 15-18cm long incision. Robot-assisted surgery is a laparoscopic technique that uses a robotic console (the da Vinci® system) to help your surgeon during the surgery. Your surgeon is in the same room, but away from you, and controls the robotic arms to perform the surgery.

Re: Bladder pain day 1 postop robotic hysterectomy and welcome to the Other Side! Bladder spasms are VERY common after surgery from catheterization and surgical shock. For me, the spasms were sensations of frequency, difficulties starting and maintaining a stream, and not feeling emptied out - often going again in 10 minutes to finish the job.
